

Rubberset®

introduces

DuraCore Plastic Roller Cores.

Durable • Solvent Resistant • Water Resistant • Reusable

Why choose rollers with DuraCore technology?

DuraCores are solid extruded solvent resistant plastic roller cores. What that means is a virtually indestructible roller core. They will not split or crack at the seams like lesser quality spiral wound plastic or phenolic roller cores. DuraCores are tough, durable high performance roller cores.

In addition to the improved durability, DuraCores are water and solvent resistant allowing the roller covers to be reused over and over again. The fabric is epoxy locked to the DuraCore for long life.

For a clear differentiation between quality levels, DuraCores are available in three wall thicknesses:

- .035" - General Purpose, One Coat Quality
- .055" - Semi Pro Quality
- .075" - Professional Quality

Look for Rubberset® roller covers with DuraCore technology for the most durable, highest performing rollers on the market.
